DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Unami (US 5,912,600).

As applied to claim 1, Unami disclose a method for manufacturing a ceramic oscillator, comprising the steps of: performing polarization processing for a mother substrate (30, Fig. 4); forming electrodes (32, Fig. 4) on the mother substrate in discrete ceramic oscillator units; and cutting (column 10, lines 60-65) the mother substrate into discrete ceramic oscillator units, and thereby obtaining discrete ceramic oscillators, wherein the step of performing polarization (column 6, lines 31-34) processing for the mother substrate comprises finishing the application of a high DC voltage when the antiresonant frequency f_a of the mother substrate in a thickness vibration mode is measured while the voltage is applied to said mother substrate, and the antiresonant frequency f_a which is being measured has reached a target value which is the antiresonant frequency of the mother substrate during polarization corresponding to a target oscillation frequency of the ceramic oscillator as a finished product (column 9, lines 43-67 and column 10, lines 1-23).

As applied to claim 2, Unami disclose further comprising: determining the target value of the antiresonant frequency of the mother substrate during polarization from correlated data which include first correlated data exhibiting the correlation between the oscillation frequency of the ceramic oscillator which has ultimately been obtained and the antiresonant frequency of the mother substrate at room temperature, and second correlated data exhibiting the correlation between the antiresonant frequency f_a of the mother substrate at room temperature and the antiresonant frequency f_a of the mother substrate during polarization (column 10, lines 13-29).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
